186 609 (Australian aborigines from the mainland) they were not Tiwi and hence not real people, or at least not human enough to share the islands with the chosen people who owned them.

Thus, the word "Tiwi" did not mean "people" in the sense of all human [101] beings, but rather "we, the only people," or the chosen people who live on and own the islands, as distinct from any other alleged human beings who might show up from time to time on the beaches. This exclusion of outsiders from real "us-ness" and hence from real "human-ness" was continued when the Europeans began to arrive in the early nineteenth century, and certainly as late as 1930 the Tiwi continued to call and think of themselves as Tiwi, *the* people, and to use other words for all non-Tiwi, whether they were mainland aborigines, Malay fishermen, Japanese pearl-divers, French priests, or British officials, who penetrated into their exclusive little cosmos.

[173] Their firm tradition that the twenty-five miles of ocean were adequate to isolate them from the mainland is confirmed by certain objective distribu- 171 tional evidence. Several characteristic features of mainland native technology were absent on Melville and Bathurst Islands, notably the spear thrower and the curved (or return) boomerang. To anthropologists, the idea of an Australian tribe lacking spear throwers and curved boomerangs is almost a contradiction in terms, and the only feasible explanation is isolation and hence failure of these mainland traits to diffuse to the islands.[1]

[411] That no culture stands absolutely still in its technology no matter how isolated it may be is suggested by the fact that the Tiwi, while lacking the [531] spear thrower and curved boomerang of the mainland, elaborated their wooden spears to a complexity of design and a degree of decoration unknown on the mainland, and also developed a much greater assortment of straight throwing sticks, made of hardwood, than any mainland tribe. Moreover, their carved and elaborately painted grave posts are unique among Aus- [764] tralian tribes, and point up both the Tiwi isolation from the mainland and the [511] favorable food situation which permitted the leisure time necessary to manufacture the elaborate posts as well as the elaborate ceremonial spears. In the nontechnological aspects of their culture we find in many respects the same absence of mainland traits and the same elaboration of traits that were distinctively or even uniquely Tiwi. Male initiation ceremonies on the mainland focus upon circumcision or subincision or both; neither custom was practiced by the Tiwi, who instead included in their initiation ritual the forcible plucking out of the pubic hair of the novice. The degree of plural marriages achieved under their marriage rules was far greater than anything reported for the mainland; the absolute prohibition of any female, regardless of age, being without a husband was unknown elsewhere in Australia; certain features of the kinship system fail to conform to any of the mainland norms, and so on. Wherever we look in their culture we get the strong impression of an Aus-

---

[177 524] [1] A toy spear thrower, played with by children, was in use, but this may be the result of post-white contact. Its native name—*p.ai*—seems most un-Tiwi, and a likely guess is that it was introduced by Cooper's mainlanders, being accepted as a toy for children but scorned as childish by the adult men.

The matter of men traveling to distant camps for ceremonials illuminates again, and from a new angle, the great value of elderly widows in the household. Tu'untalumi, during his visit to Malau in August, was able to split his household efficiently by taking a couple of old wives with him to supervise his young wives on the journey and leaving other old wives at home in Tangió to begin storing up food for the grass-burning project which he intended to stage on his return. It will be noticed in the account of his movements that he began issuing invitations to the grass burning on his way home from Malau, showing his confidence that the elderly wives he had left at home would have the preparations well in hand during his absence. A big man with a big household really needed three or four elderly widows because these enabled him to split his work force in various ways as his various political and social obligations required and to be sure of trustworthy supervision of each of the segments. A man without widows in his household, or with only one, could not do this; in fact, it was hard for a man without widows to attend ceremonials at all, or even to receive a large party of visitors to his household. And, as we have already pointed out, since such a man would probably go hungry very often because he would not dare to send his unsupervised young wives into the bush to gather food, there were practically no such men nor such households. Widows were indispensable to a senior Tiwi, both in his public and in his private life.

Making Things

Throughout this chapter we have been stressing the contrast between the dull routine of life in an isolated Tiwi household during the greater part of the year and the sort of life typical on those relatively rare occasions when something special—a festival, a funeral, a fight, a grass burning, a naming ceremony, some collective phase of men's initiation—required the assembling together of several households for joint activity. Before leaving the daily life of the isolated camp, we should mention one other area of activity—namely, the manufacturing activities of the tribe. The Tiwi did not manufacture much, but spears, throwing sticks, canoes, digging sticks, baskets, bodily ornaments, graveposts, and all the miscellaneous paraphernalia used in ceremonials had to be made in whatever leisure time people could find during the long weeks and months when each of the households lived more or less in isolation from the others. Crude and simple as these artifacts were, their construction required time, and only the older men had the time and the skill based on experience to make the more important of them.

Largely because of their failing eyesight, the older men hunted very little and hence tended to remain in camp all day while the young men were hunting and the women were gathering. There were, of course, some old men who took advantage of this time to do little except doze in the shade, but most of the household heads spent a fairly active day in camp engaged in making things. Here we find another aspect of Tiwi culture that results from

1: Hart & Pilling E-5 (1928-1954) 1960
OI20 Tiwi OI20

the relatively favorable food supply. Some of the Tiwi artifacts, particularly the highly decorative graveposts and ceremonial spears, are unique among Australian tribes, and the carving and painting of these graveposts and spears were skills possessed only by the senior men. They were provided with the leisure time necessary to develop and use these skills by the efficiency in food production of the large household which all old men were expected to accumulate with age, and which many old men did succeed in accumulating. We said earlier that the bigger the household, the better its members ate. We now add the further correlation that the bigger the household, the more leisure time was provided for its head to engage in manufacturing and artistic production. Tu'untalumi has been cited as an example of a large household head (twelve resident wives and thirteen children at home in 1928-29) who loved ceremonial affairs. It would be wrong to infer from this that Tu'untalumi only loved going to parties. He also loved preparing for them, and this preparation (for him as for all other senior men) included the manufacture of ceremonial spears, the preparation of graveposts, and the composition of songs and dances. In the long dull periods between trips outside his home district, he spent most of the days and many of the nights in the creation of these ceremonial necessities. He was not a full-time specialist in the sense that he made spears or posts to exchange with other men who had neither the time nor the skill—the rules of kinship required that every senior man make his own ceremonial spears and contract for his own posts. Tu'untalumi manufactured his graveposts to meet his own ritual obligations, but he took a more magnanimous view of those obligations than did most men. Put in our terms, we might say that he was wealthy enough (in the size of his household) to be generous with his own productions. One example of this attitude was his attendance at funerals that other men of equal kinship to the deceased did not find it necessary to attend; his frequent contribution of an extra gravepost to those provided by the chief mourners of the deceased was a similar gesture. "Tu'untalumi not only came to our mother's funeral, he also made a gravepost for it" was a very gratifying reflection for an obscure group of mourners to cherish among their memories, and of course it was acts of this sort that made the old man so well liked and admired. The economic point of the matter, however, is that only a man with as large a household as his could afford the gesture of giving away, in a situation where kinship obligations did not demand it, a gravepost that required about a week's full-time work.

It was, however, sad to observe that as an artistic producer Tu'untalumi, like many intellectuals in other cultures, tended to operate in too many media. His work as a composer of songs and dances was universally admired, but his graveposts, while appreciated, were not regarded as being as outstanding, technically speaking, as those of another old man, his crony Timalarua. In personality, Timalarua, a successful household head (eleven living wives, ten children at home), was quiet spoken, placid, and only mildly gregarious, and he is mainly of interest because in his leisure-time activity he paid but routine attention to song and dance compositions and concentrated rather single mindedly on making canoes, ceremonial spears, and graveposts. Fre-

observe the spontaneous gesture with which men, on leaving the Mission, automatically threw off their loincloths at the Mission fence and headed for the bush as naked as the day they were born. Women, in pre-white days, habitually carried a piece of bark which they held in front of themselves whenever they met a male. As soon as string or rope was introduced by the early white contacts, the women found it more convenient to tie some sort of band around their waists and double the piece of bark over this waistband. This was much handier since it left the hands free, but the bark, being stiff and unsecured, was at best a very capricious covering, and old women in the midst of public arguments often tore off their aprons and threw them at their opponents as a gesture of contempt.

Young women were more decorous and fussed modestly with their bark aprons when young men were present rather in the same way as American coeds fuss with their skirts in crowded classrooms. Theoretically, young women were supposed never to meet either young men or men outside their own household, and so the bark apron, carried in the hand, was in aboriginal times merely something to have in case of emergency. It was noticeable in Tiwi ceremonies that when the women danced, they did nothing with their hands. We think this was because, in pre-white days, their right hands, at least, were needed to hold their bark aprons in front of their pubic regions, since at dances they were in the presence of strange men.

This brief account of the daily and yearly life of the Tiwi households enables us to draw a few important conclusions about their economic life:

1. Compared with many of the mainland tribes, the Tiwi were economically rather well-off, in that the bigger household units were usually able to produce a food surplus.

2. This food surplus varied directly with the number of working wives that a household head possessed.

3. A household head with many wives was therefore, in Tiwi terms, a wealthy man who could retire entirely from the food quest and devote his time to other activities.

4. Such men were able to devote full time to other activities such as manufacturing useful and ceremonial objects and participation in ceremonial affairs and public life.

5. Wealthy men, active in one or all of these pursuits, were the "big men" of the tribe. In each band there were two or three such men, and in the whole tribe perhaps less than twenty had attained full success or were ranked by public opinion as being the most admired and influential. The next chapter examines the career patterns by which every male Tiwi sought to become, and a few succeeded in becoming, a big man.

The Politics of Widow Remarriage

Ki-in-kumi's large establishment was the sort of set-up that every Tiwi sought to achieve but few accomplished. An establishment such as his meant wealth, power, prestige, and influence for its head, and, in Malau, Ki-in-kumi was the only man with such a household. With eleven males, many of them food producing; sixteen women, all of them food producing; and several of the girls under fourteen able to assist the older women, the amount of food this unit could collect in a day provided an ample food surplus for the establishment. A man whose household was a surplus food producer was a successful man. Moreover, since the large work force that produced the food surplus contained numerous young wives who (usually) could be relied upon also to produce numerous female babies, he was doubly blessed with both the requisites—surplus food and surplus daughters—necessary to increase his influence and make more people beholden to him or dependent on him. Of the thirty-five married women in Malau, sixteen, or over 45 percent, were in this one establishment.

By comparison, the other old men of Malau were less successful.[8] Through pooling their work forces, Enquirio and Merapanui had achieved an establishment (Unit II) almost as big as that of Ki-in-kumi, and probably its members ate almost as well as the members of his, but their effort was a shared effort and their influence and prestige had to be divided between them. They had been lucky with daughters but, divided between the two fathers, the eleven daughters in their establishment were less impressive than Ki-in-kumi's eight, and the total of seven young wives between them was quite overshadowed by Ki-in-kumi's nine. The two old brothers were successful men and headed a successful operation, but their prestige and success must be rated at least one whole degree below that of Ki-in-kumi.

Another pair of elderly brothers, White Man and Ku-nai-u-ua, had also joined forces (Unit III), but the results can be judged as only fair. They were at least the best off of their age group, the 45- to 55-year-olds, but the competition in that age group was weak, as can be seen by comparison of their establishment with Units IV and V, the households of Pingirimini and Tipiperna-gerai. Perhaps the best indication of the respective success in life of the seven oldest men is that given in the column of Table III headed "young wives." Of the twenty-three such women in the band, eighteen were in the establishments[9] of the three oldest men (Units I and II); the next five men in age shared the remaining five (Units III, IV, and V).

It might be thought that the small establishments of the unsuccessful junior elders like White Man, Ku-nai-u-ua, Pingirimini, and Tipiperna-gerai could be expected to increase sharply in size and these men to grow in relative prestige and influence when death removed the three old men at the heads

[8] It will be noticed that as we move into the older group of men we have to use their native names, since most of them had no "whiteman" names.

[9] Two of these eighteen were of course actually married to Padimo, but still part of the establishment of their father, Ki-in-kumi, since Padimo's wives all lived with Ki-in-kumi's wives.

he still had six years to go after that, not finishing the final grade of *Mikingula* until somewhere past the age of 24 or 25.

In contrast with the mainland initiation ceremonies, we think the most interesting point about Tiwi initiation resides not in the formal ceremonies but in the removal from the food-production units, for long periods of the year, of all the young males between the ages of 14 and 25. It is true that they did not spend *all* their time in seclusion and that after the age of twenty they remained mostly in their household camps, where they contributed to the household food production. Nonetheless, it remains clear that only a very well-off tribe could afford to allow so much time off from food production to all its young hunters. Tiwi fathers, it would seem, in arranging for the initiation of their sons to begin just when they were becoming productive hunters, were willing to sacrifice that productivity for less tangible advantages. The youths, secluded and guarded in the bush while getting an education, were not only out of the work force but were also out of the predatory-bachelor force. A Tiwi elder made sacrifices to "send his sons to college" but he breathed easier to know that the sons of the other elders were all there too.

All males without exception had to go through the full initiation cycle, and from the time of their first forcible seizure at the age of 14-15 to their final graduation at 24-26, they were in a state of *pukimani* and their personal names were strictly taboo to everybody in the tribe. Each youth was referred to only by his grade name, *Marukumarni* for the first year, *Mikingula* for the last four years, and so on. And here we return finally to a point which was mentioned much earlier—namely, the complete unimportance in tribal eyes of all males below the age of twenty-five. Until they had completed the final stage of initiation, Tiwi males were still boys; they did not even have names. Occasionally, when collecting genealogies and coming upon a reference to a young man, the innocent anthropologist would ask, "Is he married?" In tones of the deepest contempt the informant would reply, "That kid, how could he be married? He's still *Mikingula*." Though *Mikingula* was the stage typically reached by a man at about 20-21 and lasted for the next four years, to the Tiwi it was still a stage in the life of a boy. Not until he had finished as *Mikingula* could he step out into the world and life of men. How he spent the years immediately after finishing initiation decided how soon some senior man would think sufficiently highly of him to aid him in acquiring his first ancient widow.
